Contents

Preface & Acknowledgements – xi

1 Introduction: mapping the terrain – 1

Language, linguistics, and psychology: academic interfaces – 2

Cognitive linguistics – 4

Psycholinguistics – 5

Neurolinguistics – 6

Cognitive science – 7

Cognitive neuroscience – 8

Interim summary: the permeability of disciplinary boundaries – 10

Main avenues to language attainment – 11

First language acquisition – 12

Bilingualism – 14

Second language acquisition – 18

Similarities and differences between first and second language acquisition – 21

Third language acquisition and multilingualism – 23

Summary – 25

2 Language and the brain – 27

The brain – 29

The anatomy of the brain – 29

The neurobiological basis of brain activity – 32

The functional anatomy of the brain – 32

The conscious and the unconscious mind – 41

Research methods for investigating language and the brain – 42

Psycholinguistic methods – 43

Pre-neuroimaging methods of brain research – 48

Neuroimaging – 53

Molecular genetic investigations and imaging genetics – 77

Summary – 77

- 3 Psychological processes in language acquisition I: symbolic versus connectionist accounts – 79
 - Nativism and Universal Grammar – 81
 - Universal Grammar* – 82
 - A weak form of nativism – 87
 - Non-symbolic psychological theories – 88
 - Connectionism* – 89
 - The competition model and the unified model of language acquisition* – 95
 - Dynamic(al) systems theory* – 99
 - Emergentism* – 112
 - Usage-based (or item-/exemplar-based) theories* – 116
 - Summary – 127
- 4 Psychological processes in language acquisition II: explicit versus implicit learning – 131
 - Consciousness and attention – 132
 - Consciousness* – 132
 - Attention* – 133
 - The explicit–implicit dichotomy – 135
 - Explicit learning* – 136
 - Implicit learning* – 137
 - Incidental versus intentional learning* – 140
 - Explicit versus implicit knowledge* – 142
 - Explicit versus implicit memory* – 144
 - The declarative–procedural dichotomy – 146
 - Beyond the declarative–procedural memory systems* – 148
 - Anderson’s ACT-R theory* – 148
 - At the interface of explicit/declarative and implicit/procedural knowledge – 150
 - Skill learning theory* – 151
 - Automatization* – 155
 - Initial attention and noticing* – 158
 - Explicit versus implicit language learning – 159
 - Krashen and the various interface positions* – 159
 - Ullman’s declarative–procedural model* – 161
 - Automatization and skill learning in a second language* – 162
 - Schmidt’s noticing hypothesis* – 164
 - The explicit–implicit interface in SLA* – 166
 - Summary – 174

- 5 **The learner in the language learning process I: the dynamic interplay of learner characteristics and the learning environment – 179**
 - The ‘individual differences’ paradigm: the myth and the problems – 181
 - Problems with the traditional conceptualization of ID factors – 182*
 - Problems with the traditional selection of ID factors – 184*
 - Two meanings of ‘individual difference research’ – 185*
 - Lack of stability and context-independence – 188*
 - Multicomponential nature – 189*
 - Interim summary: the dynamic nature of individual difference factors – 194*
 - Individual differences and dynamic systems theory – 196
 - Reconciliation of personality stability and dynamism – 197*
 - The proposed framework of learner-based variance in SLA – 200
 - The cognitive system – 202*
 - The motivational system – 209*
 - The emotional system – 219*
 - The interaction of cognition, motivation, affect, and the environment – 225*
 - Summary – 229
- 6 **The learner in the language learning process II: the learner’s age and the Critical Period Hypothesis – 233**
 - Is the age issue really about age? – 235
 - Critical period—sensitive period – 236
 - Definitions of critical and sensitive periods – 237*
 - Is there a critical period for first language acquisition? – 238*
 - Is there a critical period for SLA? – 240*
 - Non-native-like young learners and native-like adult learners – 242*
 - A dynamic systems perspective on the Critical Period Hypothesis – 247*
 - The age effect and its possible sources – 249
 - The younger the better – 249*
 - The older the better – 250*
 - Sources of the age effect in formal school learning contexts – 251*
 - Sources of the age effect in naturalistic SLA contexts – 253*
 - Summary – 263

7	The psychology of instructed second language acquisition – 267
	Implicit versus explicit learning in instructed SLA – 268
	<i>Is explicit instruction necessary for L2 learning?</i> – 269
	Three past approaches to L2 instruction – 272
	<i>The grammar-translation method</i> – 273
	<i>The audiolingual method</i> – 274
	<i>Communicative language teaching</i> – 275
	Current issues in L2 learning and teaching – 279
	<i>Focus on form and form-focused instruction</i> – 280
	<i>Fluency and automatization</i> – 286
	<i>Formulaic language</i> – 293
	Summary – 300
	<i>Afterword</i> – 303
	<i>References</i> – 305
	<i>Subject Index</i> – 329
	<i>Author Index</i> – 333

List of Figures

- 2.1 The macroanatomical landscape of the brain – 30
- 2.2 Some important subcortical structures of the brain – 31
- 2.3 The constituents of a neuron – 33
- 2.4 The Broca and the Wernicke areas in the left hemisphere of the brain – 36
- 2.5 Eye tracker in operation – 46
- 2.6 Scalp detectors for EEG – 56
- 2.7 Sample output of an ERP waveform – 57
- 2.8 PET scanner – 63
- 2.9 MRI scanner – 64
- 3.1 Sample connectionist network – 91
- 3.2 The double pendulum – 101
- 4.1 Squire's taxonomy of long-term memory systems with the brain structures central to each – 149
- 4.2 Typical power law curve of reaction time as a function of the number of trials – 152
